Contribution Journal

Brian — Contribution

I worked with Toan and Montserrat to complete the Module 3 ML lab. We worked together on understanding and answering the questions at the end. I focused on going through the notebook, checking that the code ran correctly, and reviewing the machine learning workflow. I also worked on testing distinctive features, such as combining the wine classification model and checking the accuracy results. After the team completed the work, I reviewed the notebook to make sure the sections were completed and that comments were all added.

Toan — Contribution

During the Module 3 lab, I worked closely with my team members, Brian and Montserrat, to get everything done. We spent time talking together about the questions, figuring out how supervised and unsupervised learning work, and discussing how the machine learning workflow flows from start to finish.

For my specific role in the team, I focused a lot on checking the Python code line by line and adding clear comments to make the steps much easier to follow. I also took charge of reviewing

the model training and testing parts, carefully looking over the numbers, accuracy scores, and confusion matrices for both the Logistic Regression and Decision Tree models to see how well they performed. Throughout the project, the three of us kept talking and coordinating with each other to make sure we understood the tricky parts, stayed on track, and finished every section correctly.

Montserrat — Contribution

I worked with Brian and Toan to complete the Module 3 machine learning lab. We worked on questions and discussed answers before adding them to the notebook. I focused on reviewing the completed notebook and checking the different sections of the assignment. I also helped review the model results and make sure the reflection and application questions were completed. After we finished, I helped check the notebook for missing sections and made sure our work was organized.

I also made sure we stayed on top of the deadline so we would not miss the date to submit the lab. helped review our work, and made sure our assigned tasks were completed on time.

Additionally, I shared ideas and suggestions during our discussions and helped check the final work for any corrections or improvements before submission.
